

Storytelling "UK Unemployed Rates over Decades" by Takafumi Shukuya. Updated on 6 May 2024. Public TableAU. On this occasion I would like to invite all of us to cultivate a little bit of things that might be able to disturb boredom and try to listen to what this data wants to tell us. Facts, data, the past are things that are always true and happen, but our perspective as humans will produce myriad colors so it may not be as accurate and beautiful as data, but definitely not monochrome. I will try my best to be a translator on this occasion, but let's take the mistake as a salt to make this "Chicken Curry" even more delicious.

1970

In 1970 – 1980 the population in the United Kingdom was around 56 million people. With 3 million working population and 8 million employed labor force (UK Parliament). Making the United Kingdom have a GDP of 130.67 billion with economic growth of 4.31% (Macrotrends).

	<i>Working population</i> ⁽¹⁾	<i>Employed labour force</i> ⁽²⁾
Early 1930s	20 to 21 million	18 to 19 million
Late 1930s	22 to 23 million	21 to 22 million
1950	22¾ to 23¼ million	22½ to 23 million
1960	24.5 million	24.2 million
1970	25.3 million	24.8 million
1980	26.3 million	24.6 million

(UK Parliament)

U.K. GDP 1960-2024

U.K. GDP - Historical Data

Year	GDP	Growth
1970	\$130.67B	4.31%
1969	\$116.46B	1.92%
1968	\$107.76B	5.44%

Based on the graph above, 4.5% of the total population fails to find work. If this is a fixed figure, it will be around 2.52 million people. With a working population of 3 million, we will find as many as 500,000 people who have entered the working age and are unable to find their "Passion" in life. On the other hand, based on data from the UK Parliament, there are 8 million Employed Labor Force. Making 14.2% of people who don't have to work, get a reason to get up early every day. Hopefully at that time the "Tea Time" culture was established. What is more interesting than this is, how could this situation be a solution in my current country HAHHA. The situation is turning around in a place where there is so much Working Population but so few jobs :).

Footnote:

- The population in the UK in 1970 was 56,000,000
- The total working population is 3,000,000
- Employed Labor Force of 8,000,000
- GDP 130,670,000,000
- Unemployed Rates 4.5% ($4.5\% * 56,000,000 = 2,520,000$)
- Unsuitable work force ($8/56 * 100 = 14.2\%$)
